MS series**

FESTO

Key features

Service unit components of the MS series

Solutions for every application

With its large product range, highly effective components and a wide choice of functions, the MS series from Festo offers a complete concept for compressed air preparation. It is suitable for simple standard applications as well as application-specific solutions with very high quality requirements. Available as individual components, pre-assembled combinations ex-stock,

application-specific combinations or complete turnkey solutions. The five sizes in the MS series achieve maximum flow rates with low space requirements.

Freely combinable function modules

Pressure regulators, on/off and soft-start valves with safety function, filters, pressure and flow sensors, dryers, sensors and lubricators can be assembled into a suitable solution for every task. With the modular structure the components can be combined as required. The simple connection system saves time because the entire combination doesn't need to be disassembled when replacing individual modules.

Many of the components are also UL and ATEX certified.

CAD models and configurator

Convenient tools for planning and selecting application-specific individual devices and combinations. The product configurator lets you configure customised solutions quickly and transfer the order data without any hassle.

Engineering tools

Air quality

This program supports configuring an appropriate service unit. Please insert the required air cleanliness either by your application or an ISO-code or by direct selection of air filters.

Selection criteria: Application

Filter combination is proposed based upon your selected application

- ☐ standard pneumatics operation of valves and cylinders, e.g. in automotive industry, secondary packaging
- ☐ mining and building industry applications without special air cleanliness requirements
- ☐ application of pressure operated tools and machines: pneumatic hammer, air engine, positioning with proportional valve
- ☐ electronic, flatpanel and solar industry, textile and paper production application with residual oil content <0.5 mg/m³
- ☐ painting, powder coating, air bearing application with residual oil content <0.01 mg/m³
- ☐ food and beverage industry: optics application with residual oil content <0.003 mg/m³ reduction of oil vapours and aromas

Selection criteria: ISO-class

Filter combination is proposed based upon the air cleanliness class according to ISO 8573-1:2010

particle : 4 * : oil

ISO

* Downstream from the compressor the water content is assumed to be ISO class 4. Better classes can be achieved by applying an adsorption dryer PDAD or a membrane dryer LDM1

Direct filter selection

Independent selection of filter combination

- ☐ 40 µm Filter
- ☐ 5 µm Filter
- ☐ 1 µm Fine Filter
- ☐ 0.01 µm Micro Filter *
- ☐ Active Carbon Filter

* To enhance the filter lifetime and in consequence the maintenance interval arrange a 1 µm Fine Filter in front of the 0.01 µm Micro Filter as a preliminary filter.

Integrated sensors

Pressure and flow sensors

- Maximum machine availability thanks to controlled processes
- Reliable compressed air preparation and supply for systems
- Integrated or stand-alone
- Easy to connect with M8/M12 plug

Safety functions

Soft-start/quick exhaust valves

MS6-SV/MS9-SV

- Fast and reliable exhausting of systems up to Performance Level e, certified to EN ISO 13849-1
- Integrated soft-start function

Saving energy

Service unit combinations MSE6

- Fully automatic monitoring and regulation of the compressed air supply
- Automatic shut-off of the compressed air in stand-by mode
- Detection and notification of leakages
- Condition monitoring of relevant process data

Intelligent mix of sizes

- Optimum flow rate with a size that is up to 18% smaller
- Excellent energy efficiency
- Cost-optimised combinations – save up to 30%!

Information

The next few pages provide a brief overview of the product range for the MS series service unit components.

You can find detailed information and all the technical data in the documentation for the relevant service unit component.

Accessories such as connecting plates or mounting brackets can be ordered either via the configurator or separately.

Design of a service unit combination

The sequence of the individual components within a service unit combination is relevant for safety and functionality. The service unit components cannot be combined in any order in the flow direction. There are restrictions and rules.

The configurator for the service unit MSB is a reliable and convenient way of arranging individual service unit components and ensures compliance with the applicable rules. As a result, you get a fully assembled unit, including UL or ATEX certification, if necessary.

When combining a unit from individually configured and ordered service unit components, the points on the right must be adhered to under all circumstances.

- Regulators MS-LFR/LR/LRP are only permissible in the flow direction with the same or decreasing pressure regulation range
- Filters MS-LFR/LF/LFM/LFX are only permissible in the flow direction with an increasing grade of filtration
- Lubricators MS-LOE are not permitted in the flow direction upstream of a filter MS-LFR/LFM/LF/LFX, water separator MS-LWS or membrane air dryer MS-LDM1

- A micro filter MS-LFM must be installed in the flow direction upstream of an activated carbon filter MS-LFX or membrane air dryer MS-LDM1
- A flow sensor SFAM cannot be installed directly downstream of a regulator MS-LFR/LR; a branching module MS-FRM must be positioned between them
- A soft-start/quick exhaust valve MS-SV must be the last service unit component in the flow direction

Function

-  - Flow rate
1200 ... 8700 l/min
-  - Temperature range
-10 ... +60 °C
-  - Operating pressure
0 ... 18 bar
-  - www.festo.com

- Manually actuated on/off valve for pressurising and exhausting pneumatic systems
- The valve is switched by turning the rotary knob
- A silencer can be connected to port 3 or the exhaust air can be ducted here
- When the valve is closed, the rotary knob can be secured with a padlock
- Optional pressure gauge
- Optional pressure sensor
- Optional device variant EX4 for use in potentially explosive areas in zones 1, 2, 21 and 22

Type of mounting	With accessories In-line installation	
Mounting position	Any ¹⁾	
Pressure indication	Via pressure sensor for indicating the output pressure and electrical output via LCD display Via pressure sensor for indicating the status of the output pressure and the electrical output Via pressure gauge for displaying the output pressure Via pressure gauge with red/green scale for indicating the output pressure Prepared for G1/8 Prepared for G1/4	
Valve function	3/2-way valve, closed, single solenoid	
Exhaust function	Cannot be throttled	
Manual override	Electrical	
With supply voltage	[10V24], [10V24F] [V24], [V24P], [10V24P], [V110], [V230] [10V24C], [10V24D]	Non-detenting Non-detenting/detenting None
Actuation type		
Reset method	Mechanical spring	
Switching position indication	With accessories	
Type of actuation	Piloted	
Pilot air supply	Internal	
Flow direction	Not reversible	

1) The on/off valve must be mounted vertically when combined with a pressure sensor as condensate must not collect in the pressure sensor.
- Note: This product conforms to ISO 1179-1 and ISO 228-1.

Function

-  - Flow rate
1000 ... 6450 l/min
-  - Temperature range
-10 ... +60 °C
-  - Operating pressure
4 ... 18 bar

The duration of the pressure build-up is set using the restrictor attached to the valve cap.

The output pressure p2 rises slowly in accordance with the restrictor setting. The main seat opens when the switch-through pressure is reached.

- Pneumatically actuated soft-start valve for slowly pressurising and exhausting pneumatic systems (for use with on/off valves EM1 and EE)
- The drives move slowly and reliably into the initial position
- Sudden and erratic movements are avoided
- Main seat opening at approx. 50% of operating pressure
- Adjustable switching time delay
- Optional pressure sensor
- Optional device variant EX4 for use in potentially explosive areas in zones 1, 2, 21 and 22

The duration of the pressure build-up is set using the restrictor attached to the valve cap.
The output pressure p2 rises slowly in accordance with the restrictor setting. While the solenoid valve is not actuated, only the flow rate of the flow control valve is available. The main seat is only opened when the solenoid valve is energised.

When the solenoid valve is switched off, the main seat is closed and only the flow rate of the flow control valve is available.
When exhausting a system, the solenoid valve should remain switched on; this increases the volume flow from 2 to 1 and shortens the exhaust time. For this, a quick exhaust valve must be connected upstream.

- Electrically actuated soft-start valve for slowly pressurising and exhausting pneumatic installations
- The drives move slowly and reliably into the initial position
- Sudden and erratic movements are avoided
- With solenoid coil, without plug socket
- Choice of three voltage ranges
- The switching pressure can be precisely controlled with a solenoid valve
- Adjustable switching time delay
- Manual override: non-detenting and detenting (variant 10V24 non-detenting only)
- Solenoid actuator can be repositioned by 180°
- Optional pressure sensor
- Optional device variant EX2 for use in potentially explosive areas in zones 2 and 22

1) Module connector [2] is included in the scope of delivery.

2) The screws for the wall bracket on the rear are partially covered by the housing of this service unit component. Depending on the configuration of the service unit combination, the screws will no longer be accessible. The mounting bracket MS9-WPM is therefore recommended for wall mounting. It can be used to attach a fully assembled combination to the pre-mounted wall bracket.

1) Module connector [2] is included in the scope of delivery.

2) The screws for the wall bracket on the rear are partially covered by the housing of this service unit component. Depending on the configuration of the service unit combination, the screws will no longer be accessible. The mounting bracket MS9-WPM is therefore recommended for wall mounting. It can be used to attach a fully assembled combination to the pre-mounted wall bracket.

- Electrically actuated on/off valve for pressurising and exhausting pneumatic systems
- Ducted exhaust is possible via a threaded connection with silencer
- With solenoid coil, without plug socket
- Choice of three voltage ranges
- Detenting and non-detenting manual override
- Optional pressure gauge
- Optional device variant EX2 for use in potentially explosive areas in zones 2 and 22 (plug socket MSSD-C-24V-EX included in scope of delivery)

The duration of the pressure build-up is set using the restrictor attached to the valve cap.

The output pressure p₂ rises slowly in accordance with the restrictor setting. The main seat opens when the switch-through pressure is reached.

- Pneumatically actuated soft-start valve for slowly pressurising and exhausting pneumatic systems (for use with on/off valves EM and EE)
- The drives move slowly and reliably into the initial position
- Sudden and erratic movements are avoided
- Main seat opening at approx. 50% of operating pressure
- Adjustable switching time delay

The duration of the pressure build-up is set using the restrictor attached to the valve cap. The output pressure p2 rises slowly in accordance with the restrictor setting. While the solenoid valve is not actuated, only the flow rate of the flow control valve is available. The main seat is only opened when the solenoid valve is energised.

When the solenoid valve is switched off, the main seat is closed and only the flow rate of the flow control valve is available. When exhausting a system, the solenoid valve should remain switched on; this increases the volume flow from 2 to 1 and shortens the exhaust time.

- Electrically actuated soft-start valve for slowly pressurising and exhausting pneumatic systems
- The drives move slowly and reliably into the initial position
- Sudden and erratic movements are avoided
- With solenoid coil, without plug socket
- The switching pressure can be precisely controlled with a solenoid valve
- Adjustable switching time delay
- Choice of three voltage ranges
- Detenting and non-detenting manual override
